JYOTHI

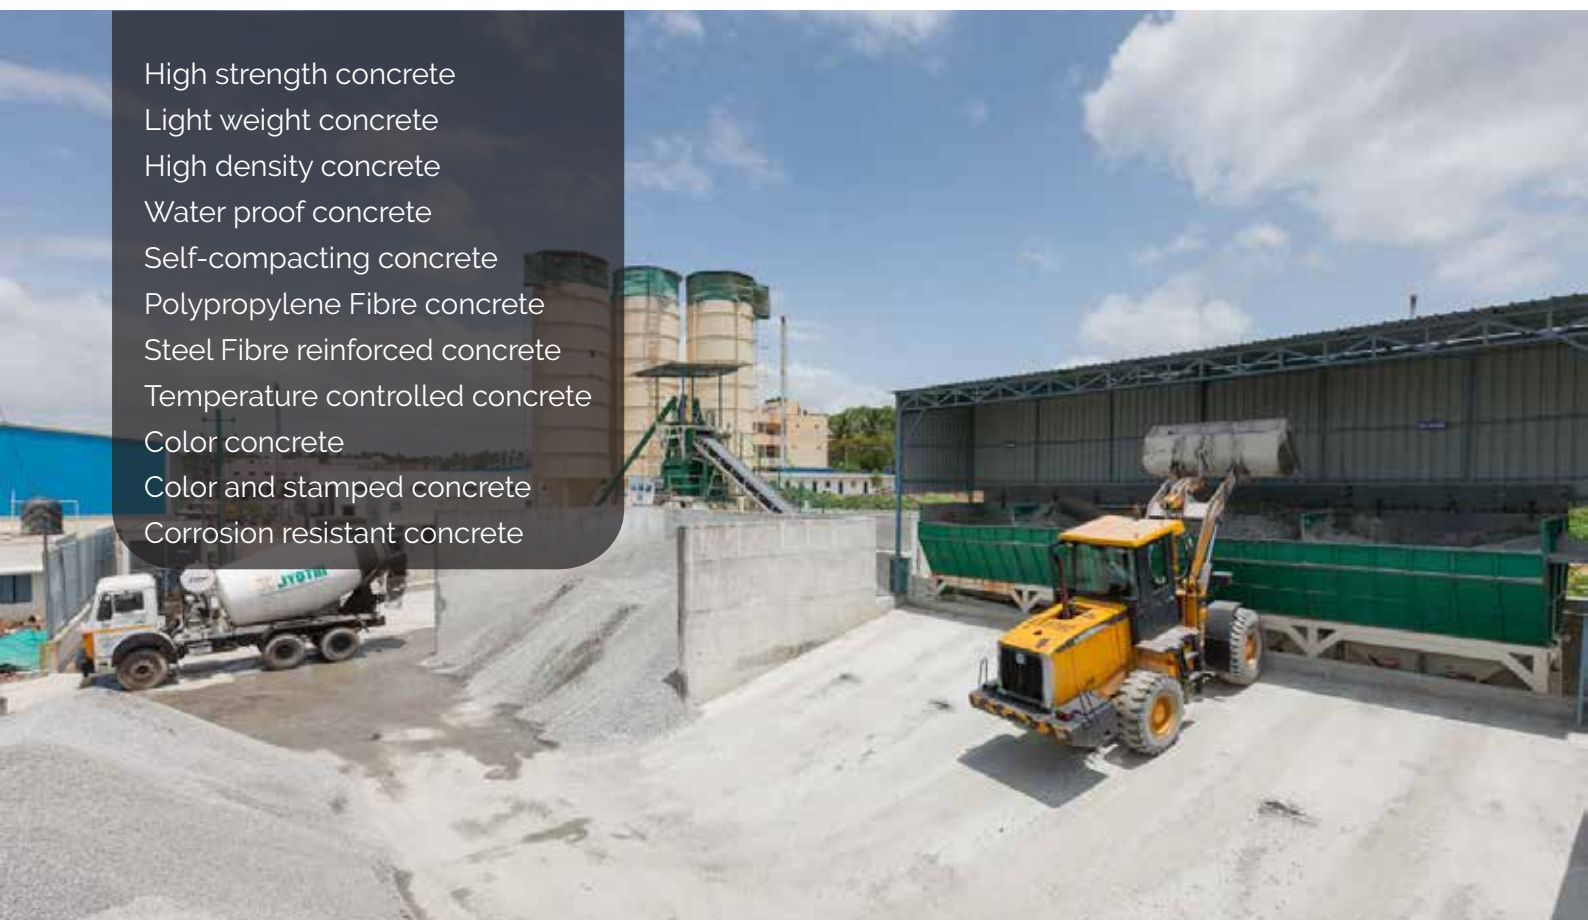

LIVING INNOVATIONS

Jyothi ConMix, is one of the Bangalore's fastest growing Ready Mix Concrete company since 2012 with a strong presence in core construction solutions. We specialise in manufacturing and production of high quality ready mix concrete through streamlined processes and quality control procedures - which empower customers by bringing innovation & sustainability to our construction. The company's inherent attributes of visioning and continual improvement helped shift focus towards R&D, thus modernising and expanding its capacity. JYOTHI CONMIX is standard concrete mix made when required and transported to sites by concrete truck. It fits most applications such as foundations, flooring and driveways, paths and retaining walls to name just a few.

Ready-Mix is made to specific requirements, often containing additives for colour, water-proofing, hardening or mixes that allow pumping to sites with difficult access. It is the preferred mixing concept as a more consistent and precise product is produced. Readymix Concrete is manufactured in a stationary plant in a central batching and mixing plant for delivery or supply to a purchaser in a plastic and unhardened state requiring no further treatment before being placed in the position where it is to set and to harden. Different raw materials like cement, coarse aggregates, sand, water and admixtures are accurately weighed, correctly proportioned and mixed thoroughly in RMC plants, which are almost 100% computerised. As a result, in every batch, the quality of concrete remains the same.

Jyothi Conmix is always in-line with the equipment of latest technology and developments occurring in the sphere of concrete technology and adapts ourselves to the needs of current trend in the market. We are one of the few organizations in Bangalore which has successfully produced and delivered special concretes.

- High strength concrete
- Light weight concrete
- High density concrete
- Water proof concrete
- Self-compacting concrete
- Polypropylene Fibre concrete
- Steel Fibre reinforced concrete
- Temperature controlled concrete
- Color concrete
- Color and stamped concrete
- Corrosion resistant concrete

Quality

Quality Scheme is formulated by well known experts in the field of concrete after in-depth study of quality systems in different parts . Halfyearly audit of production and quality facility from independent external auditors.

- Concrete mixes of various grades are designed in laboratory as per established procedures to comply with IS code specifications
- Cubes are cast at the plant as well as at the site. Customer can therefore ascertain that the concrete he receives at his site has the designed strength.
- Slump is tested immediately after the production and at the time of pour. Required slump is ensured.
- The quality system is periodically reviewed for improvement on a continual basis.

Service

- We have a track record which is spotless.
- Excellent Customer Support before and after the concreting.
- Better site management practices during operations at site.
- Large fleet of Transit Mixers with the capacity to expand.
